

Coastal Waste Services

We offer Lab Packing Services for:

- Colleges and Universities
- Hospitals
- Industrial/Manufacturing Plants
- High Schools
- Laboratories
- Government Facilities
- Chemical R&D Facilities

"Lab Packing" is the term used to describe the process of:

- categorizing and segregating small containers of chemicals, solvents, reagents, dyes, inks, acids, bases, cleaners, strippers, etc. into various hazard classes.
- repacking them into larger containers with compatible absorbent.
- labeling and preparing the containers to be shipped for disposal.
- providing the complete project paperwork including profiles, manifests, LDR's and inventory sheets.

The Problem

The problem of managing small containers of hazardous waste is a difficult one. If you own or manage a laboratory, warehouse, hospital, college or high school that uses small containers of chemicals, proper disposal can sometimes become overwhelming. Over time, you'll find that the expired, partially used and no longer needed jars and cans have not only accumulated, but they've multiplied.

You can't just throw them in the trash, pour them down a drain or on the ground because there are criminal penalties for doing so. These small quantities of dangerous chemicals can't be safely combined. Even if you could combine one or more, the resulting mixture is often more expensive to dispose of than had you disposed of them individually.

The Solution

The proper method of disposal is to contract a specialty firm, such as Coastal Waste Services, that knows the regulations and the chemistry to safely pack them for disposal at a RCRA-approved facility.

Advantages of Using Coastal Waste Services

- Over 20 Years Experience
- Contractor's Pollution Liability Insurance
- 40-Hour OSHA /RCRA Training with Annual Updates
- All materials are transported in DOT approved containers
- Safe, Efficient, Cost Effective and Environmentally Sound
- Turnkey Lab Packing Services

One of the more challenging issues facing research labs, universities, colleges, schools, and manufacturers is the proper removal of laboratory reagents and other small quantity chemicals. Coastal Waste Services provides you with the peace of mind that your unwanted waste will be disposed of in a safe, cost effective, efficient and environmentally sound manner.

Other Services Provided Include:

- Drummed Haz-Waste Disposal
- Site Remediation
- Bulk Haz-Waste Shipments
- Universal Waste Disposal
- Pressurized Cylinder Disposal
- Low Level Radioactive Waste Disposal
